PROFESSIONAL SUMMARY

AI Automation Engineer and founder of deciban (formerly Rabelo Co.), building production AI agents, automation workflows, platforms and in-house products that turn business context into measurable results. Hands-on across the full stack: n8n agent orchestration, LLM integration (Claude, GPT), RAG with vector databases, computer vision, CRM automation, multi-tenant web apps and Windows desktop apps shipped end to end. A background in B2B sales keeps the systems I build tied to how revenue actually happens. English C2 (EF SET Certified).

CORE SKILLS

AI & Automation: AI Agent Workflows (n8n), LLM Integration (Claude, GPT-4o, AI SDK), Agentic Tool Use, Structured Output, Prompt Engineering, Per-Conversation Cost Control, RAG / Vector Search (pgvector, HNSW, embeddings), Computer Vision (ONNX Runtime, GPT-4o Vision), Audio Transcription & Summarization (Whisper)

GTM & CRM Intelligence: CRM Automation (Pipedrive, Kommo), Stage-Based Activity Cadences, AI-Generated Follow-up, Pre/Post-Call Briefs, Lead Scoring & Routing, Meta Lead Ads Ingestion, Event-Fed Funnel Dashboards

Engineering: TypeScript, JavaScript, Python, Rust, Next.js, React, Node.js, FastAPI, Tauri 2, PostgreSQL, SQLite, Supabase (RLS), Redis, REST API design, Stripe

Data & Infra: Data Pipelines, Cron / ETL Jobs, SQL, Edge Functions, Evolution API (WhatsApp), Meta Graph API, ClickUp API, Vercel, Railway

Practices: Product Discovery, Prototype-First Validation, Fixed-Scope Proposals, Security & LGPD by Design (RLS, rate limiting, consent), Design Systems & Motion

EXPERIENCE

Founder & AI Automation Engineer — deciban, formerly Rabelo Co. (Remote)

Apr 2025 – Present

AI automation and software studio delivering agents, platforms and in-house products for B2B clients in retail, healthcare, beauty and marketing — renamed deciban in Sep 2026.

- Built and shipped **production AI agents on n8n** for 7+ client businesses, integrating Claude/GPT with WhatsApp (Evolution API) and CRMs (Pipedrive, Kommo) — multimodal (text, audio, image), with message buffering, memory, qualification tools and human handoff.
- Engineered a **stage-aware activity-cadence engine** (128-node n8n workflow) that creates touchpoints by funnel stage and date and **rolls them back** when a deal moves stage — safe to re-run without duplicating or orphaning records.
- Automated **post-call CRM intelligence** (Whisper transcription → GPT summary → note on the deal) and an **event-fed funnel dashboard** through a per-client authenticated edge function.
- Architected a **hybrid RAG + API agent** (pgvector, 1536-dim embeddings) serving static knowledge from the vector store and reserving live calls for scheduling — migrating 20 professionals, 224 services and 500 clients.
- Shipped **Face Finder**, face-recognition search over an event archive: **3,995 photos and 15,681 faces** indexed with ONNX Runtime on GPU, pgvector HNSW search **under one second**, consent before scan and no selfie stored.
- Delivered **multi-tenant SaaS platforms**: content approval and auto-publishing via the Meta Graph API, a mobile-first clinic calendar with a public API, and a CRM with an embedded AI agent and LGPD guardrails, with per-conversation cost measured before launch.
- Built **in-house Windows apps in Tauri 2 / Rust**: uai? (selection-aware pocket translator, ~20 ms UI Automation read, closed beta with auto-update) and Grudaí (always-on-top notes with encrypted notes and reminders).

Sales Representative (B2B) — Tools & Construction Retail

Apr 2022 – Dec 2023

- Counter and business-account sales: quotes and follow-up for corporate buyers, plus the online sales channel alongside the physical store — the qualification instincts behind today's AI agents.

SELECTED PROJECTS

Face Finder — find your event photos with a selfie · *Python · ONNX Runtime (GPU) · pgvector HNSW · PWA · Vercel*

Face detection and embeddings over a 3,995-photo archive, similarity search under one second, ZIP download. Public demo runs on the visitor's own photos.

uai? — pocket translator next to the cursor · *Rust · Tauri 2 · UI Automation · Next.js · Supabase*

Select text in any Windows app and pause: translation, currency conversion and AI actions appear by the cursor. Closed beta with landing page, trailer, invite codes and auto-update.

Multimodal WhatsApp SDR Agent · *n8n · GPT-4o · Whisper · Vision · Evolution API · Redis · Postgres*

24/7 qualification and follow-up (10 min → 14 days cascade) with CRM stage moves, human handoff and funnel events — 9 workflows, 107 nodes in the main agent.

RAG Scheduling Agent (beauty vertical) · *n8n · Supabase pgvector · OpenAI embeddings*

Hybrid RAG + live scheduling API with daily embedding ingestion and AI→human handoff; reverse-engineered an undocumented third-party API (Cognito auth).

FIA — personal finance web app · *Next.js 15 · Supabase (RLS) · Vercel*

Recurring expenses, installments, goals, Central Bank rate sync and a versioned REST API with keys consumed by external automation.

EDUCATION

B.Sc. Software Engineering — in progress · 2024 – Dec 2027

CERTIFICATIONS & TRAINING

- **EF SET English Certificate — C2 Proficient (77/100)**, May 2024
- Technical training in Automation & AI — Escola de Automação, NoCode Academy, Kommetrik
